In order to offer our customers exactly the high-quality products they need, we hold ourselves to high standards and fully comply with all legal and regulatory requirements.

We strive for holistic quality

Our many years of experience and the certified quality management system introduced in 1998 compliant with the DIN EN ISO 13485 standard guarantee the quality of our products and the corresponding processes throughout the company.

Certified test laboratory

Functionality and safety are key aspects for medical devices. We conduct in-house tests according to DIN EN ISO 10328* to Verify this for our products in prosthetics. Our test laboratory certified according to DIN EN ISO 17025** is available for this purpose.

Declaration of conformity

Our declaration of conformity confirms that the identified products meet the requirements of Regulation (EU) 2017/745 (MDR). To meet documentation requirements, please apply the self-adhesive article labels of the articles used to the patient certificate and fill out all of the patient information.

Self-adhesive article labels

Use the self-adhesive article labels for documentation of the products used on the patient certificate. In case of a complaint, this customer/patient documentation serves as proof of compliance with all mandatory technical directives for the construction of a prosthesis and of meeting the legal requirements of the medical device law. In the event of a complaint and any warranty or guarantee claim for used goods, the patient certificate must be completed in full and sent to Streifeneder ortho.production GmbH.

Streifylen Polyethylene (PE-HD) 111P17, 111P20	Dimensions: 2,000 mm x 1,000 mm Thicknesses: 1, 2, 3, 4, 5, 6 and 8 mm (111P17); 2, 3, 4, 5, 6 and 10 mm (111P20) Colours: white or black Designated use: night splints, positioning devices, corsets Properties: thermoformable, weldable, drivable, very low material shrinkage Due to the pigments, black Streifylen is somewhat stiffer than white Streifylen Moulding temp.: approx. 120 °C (1 mm), approx. 120-140 °C (2 mm), approx. 165-180 °C (3 mm and up)	<p>Depending on the oven type, always use a clean PTFE coating as a lining; talcum or aggressive cleaning agents (e.g. acetone) damage the surface of the material. The dryer the model, the less material shrinkage occurs. Slower and more even cooling of the synthetic material on the model reduces the occurrence of material stress. Always ensure that the distance from the oven to the model is as short as possible, since the window for optimal thermoforming is very small, especially for thermoplastic polypropylene (PP). Even an open window in the workshop can produce a draught and cool the material prematurely (this information generally applies for all thermoplastics used in orthopaedic technology). For information about suitable colouring paper and helpful processing videos, visit www.streifeneder.de/op.</p>

Do not pull too hard, otherwise there is a risk that the padding material may separate and tear. Firm pressure during welding is necessary due to the foam component. Foam can be restored through the light application of a blow-dryer at low temperature.</p>

If the casting plaster is mixed with warm water, hardening will be faster; cold water will delay the hardening process. If lots of plaster is used with little water, a sturdy and hard plaster model will be created. If more water is used, the hardened plaster will be softer and therefore easier for modeling. The optimal temperature for drying plaster cast models is between 50-55 °C.
